## 4 Residue-property plots (i)

These plots are provided for all protein, RNA, DNA and oligosaccharide chains in the entry. The first graphic is the same as shown in the summary in section 1 of this report. The second graphic shows the sequence where residues are colour-coded according to the number of geometric quality criteria for which they contain at least one outlier: green $=0$, yellow $=1$, orange $=2$ and red $=$ 3 or more. Stretches of 2 or more consecutive residues without any outliers are shown as green connectors. Residues which are classified as ill-defined in the NMR ensemble, are shown in cyan with an underline colour-coded according to the previous scheme. Residues which were present in the experimental sample, but not modelled in the final structure are shown in grey.

## 5 Refinement protocol and experimental data overview (i)

The models were refined using the following method: simulated annealing.

The following table shows the software used for structure solution, optimisation and refinement.

| Software name | Classification | Version |
| :--- | :--- | :--- |
| CNSSOLVE | structure solution |  |
| CNSSOLVE | refinement |  |

The following table shows chemical shift validation statistics as aggregates over all chemical shift files. Detailed validation can be found in section 7 of this report.

A value above 0.2 is an indication of significant predicted disorder. The colour of the bar shows whether the residue is in the welldefined core (black) or in the ill-defined residue ranges (cyan), as described in section 2 on ensemble composition.If well-defined core and ill-defined regions are not identified then it is shown as gray bars.

## 10 Dihedral-angle violation analysis

### 10.1 Summary of dihedral-angle violations

 (i)The following table provides the summary of dihedral-angle violations in different dihedral-angle types. Violations less than $1^{\circ}$ are not included in the calculation.

| Angle type | Count | $\%^{1}$ | Violated $^{3}$ |  |  | Consistently Violated |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | Count | $\%^{2}$ | $\%^{1}$ | Count | $\%^{2}$ | $\%^{1}$ |
| PSI | 72 | 50.0 | 12 | 16.7 | 8.3 | 12 | 16.7 | 8.3 |
| PHI | 72 | 50.0 | 13 | 18.1 | 9.0 | 13 | 18.1 | 9.0 |
| Total | 144 | 100.0 | 25 | 17.4 | 17.4 | 25 | 17.4 | 17.4 |

${ }^{1}$ percentage calculated with respect to total number of dihedral-angle restraints, ${ }^{2}$ percentage calculated with respect to number of restraints in a particular dihedral-angle type, ${ }^{3}$ violated in at least one model, ${ }^{4}$ violated in all the models
10.1.1 Bar chart : Distribution of dihedral-angles and violations (i)

Violated and consistently violated restraints are shown using different hatch patterns in their respective categories

### 10.2 Dihedral-angle violation statistics for each model (i)

The following table provides the dihedral-angle violation statistics for each model in the ensemble. Violations less than $1^{\circ}$ are not included in the statistics.

| Model ID | Number of violations |  | Mean ( ${ }^{\circ}$ ) | $\operatorname{Max}\left({ }^{\circ}\right)$ | SD $\left({ }^{\circ}\right)$ | Median ( ${ }^{\circ}$ ) |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | PSI | PHI |  |  |  |  |  |
| 1 | 12 | 13 | 25 | 1.74 | 2.98 | 0.65 | 1.52 |

10.2.1 Bar graph : Dihedral violation statistics for each model (i)

The mean(dot), median(x) and the standard deviation are shown in blue with respect to the y axis on the right

### 10.3 Dihedral-angle violation statistics for the ensemble (i)

Violation analysis may find that some restraints are violated in very few models and some are violated in most of models. The following table provides this information as number of violated restraints for a given fraction of ensemble.

| Number of violated restraints |  | Fraction of the ensemble |  |  |
| :---: | :---: | :---: | :---: | :---: |
| PSI | PHI | Total | Count $^{1}$ | $\%$ |
| 12 | 13 | 25 | 1 | 100.0 |

${ }^{1}$ Number of models with violations

Fraction of the ensemble (\%)

### 10.4 Most violated dihedral-angle restraints in the ensemble (i)

No violations found

### 10.5 All violated dihedral-angle restraints (i)

10.5.1 Histogram : Distribution of violations (i)

The following histogram shows the distribution of the absolute value of the violation for all violated restraints in the ensemble.

### 10.5.2 Table: All violated dihedral-angle restraints (i)

The following table provides the list of violationsfor the 10 worst performing restraints, sorted by the violation value. The Key (restraint list ID, restraint ID) is the unique identifier for a given restraint.
